## HANG AND LOCK TO THE WALL

Attach two **Accu-Hanger** brackets as shown. Then remove the release line from one side of a **3M Command Picture Hanging Strip** and stick it to the bottom rung as show. Position your picture on the wall, then push to make marks on the wall. Follow the hanging steps using either the **Atomic Anchors** or installing nails into wood studs. With you picture hanging on the wall, gently pull the bottom of your frame out away from the wall and pull off the other release liner on the **3M Command Strip**. Gently lower the bottom of the frame until the **3M Command Strip** sticks to the wall. Push on the front of the frame over the **3M Command Strip** so it sticks strongly to the wall. Job complete and your picture is now locked to the wall. If you ever want to move your picture, simply pull out on the bottom of the frame to separate the **Command Strips**. You can use this procedure to hang many other items the same way.

PICTURE LOCKED TO THE WALL
