## HANG HEAVY ITEMS UP TO 100 LBS.

NOTE: WHEN HANGING HEAVY ITEMS, MORE THAN ONE PERSON MAY BE REQUIRED.

Determine where you will be hanging your item in relationship to where the wood studs are located behind your wall. Then attach four (4) Accu-Hanger brackets so the point (spike or tip) on the brackets are 16" on center apart from the other one horizontally. (*16" on center is typically the distance between the wood studs behind the wall. Consider using a stud finder in determining the exact location of each stud*) The marking point (spike or tip) needs to be aligned with the center of the wood stud when you hang your picture on the wall. Position your item on the wall, then push to make the four marks. Install long nails or long flat head screws in the marks, leaving the heads out 1/8". Remove the four marking tabs and hang your item.
