

## HANG PICTURES NAILING DIRECTLY INTO WOOD STUDS

When hanging heavy pictures or items on the wall and you want to install nails or screw directly into wood studs behind the wall, follow these easy instructions. Using a stud finder, locate where the studs are positioned behind the wall. Place a long piece of masking tape (horizontally) over the area where the studs are and make pencil marks depicting the center of the studs as show below. Position your picture on the wall where you want it to hang. Place a piece of masking tape on the front of the frame and make a pencil mark on the masking tape that depicts the center of the stud. Use this mark for attaching the Smart Hangers on the back of the frame. The spike on the marking tab needs to be aligned with this mark.
