

## YOU CAN ATTACH SMART HANGERS RANDOMLY

The point (or spike on the snap-on marking tabs) marks the exact location where you install the fastener in the wall. So you don't need to do any measuring when attaching the Smart Hangers. If one is higher or lower than the other one, no problem. The Smart Hanger always matches up perfectly with the fastener to give you pinpoint accuracy. You can't screw this up, or as we say, "It's Goof Proof". The Smart Hangers can even be twisted up to 15° off parallel with the top edge of the frame and your picture will still hang perfectly straight every time.

### **Note:**

Make sure your picture frame is thicker than the length of the screw to prevent it from coming out on the front side. If there's room to attach the brackets, you can hang anything within the weight limits shown on the package.
